

REWIND Functionality Updates

Posted by MrBlades - 18 Feb 2015 08:37

Ahoy,

Gaz has recently begun some updates to the Rewind functionality, including adding some filtering to the process and the ability to start show replays at set points during the recording (30 minute intervals) so you can easily catch up on things you may have previously missed without wading through it all again (unless you wanted to.)

Please feel free to offer feedback to the system and if you run into any bugs do let us know.

Please also note that much of the rewind functionality is transferred to the slide out player on the left where you can also switch to live DJ's and jukebox as well as restart rewind from the last selected show and start point.

Enjoy!

Please add a 180 minute marker for any DJ LMP rewind 😊

You could just, i dunno, NOT click play LMP in the first place perhaps?

May I quote you on that ? 😊

LMP shows remind me of something exploding and skipping to the end is like:

imgtfy.com/?q=walk+away+explosions+without+looking

One does not simply skip to the end of a LMP show. LMP still owes me his corpse ... he's slacking.
